MARKET LEADERS IN DESIGN AND MANUFACTURING OF MATERIALS HANDLING EQUIPMENT

WHY CHOOSE PALAMATIC?

Manual stacking of heavy awkward loads presents considerable dangers to operators. Handling TVs weighing as much as 60kgs from box to bench and vice versa requires bodily movements which stretch arm, shoulder and back muscles to the limit. Spinal and neck injuries are also a real possibility.

These processes can be carried out effortlessly using Palamatic Vacuum Tube Lifters.

As well as removing all manual handling and associated injuries from these processes, Palamatic's system also enables a more effective utilisation of work force by allowing a single operator to carry out a process which often requires two or more staff.

Benefits of the Palamatic lifting systems include; effortless lifting, increased productivity, increased operator safety and performance. All giving you a low maintenance, high efficiency system.

'H' Style - used for covering large working areas. Supported from either floor mounted support pillars or existing structural steel work.

With *Telescopic Bridge Beam*, ideal for reaching into restricted areas.

With *Raised Bridge Beam*, ideal in low headroom situations.

With *Extended Rail* to allow for Horizontal Tube Unit and vacuum hose bunching whilst maintaining large area coverage.

With three *Downtrack Rails* enabling the operator to cover larger working areas with a Horizontal Tube Unit.

With *Dual Bridge Beam*, ideal for mounting of Manipulators.
