

## ROTATION - NO EFFORT - How it works - BALANCE

It is essential that for easy turning of the roll, it must always be in balance. This means that the center of the roll must be on the 45 degree axis line, as demonstrated below by the Red dotted line.

As a roll becomes wider, it must use a longer Box Arm to stay in balance.
Torros offers 2 standard lengths of Box Arm, 350 mm and 435 mm which cover most roll sizes.

SUMMARY

| Art No. | Material | Core Size | Box Length | Grip | Rotation |
| :---: | :---: | :---: | :---: | :---: | :---: |
| FA1130 | Stainless | 76 | 350 | Manual | Manual |
| FA1131 | Stainless | 76 | 435 | Manual | Manual |
| FA1132 | Painted | 76 | 350 | Manual | Manual |
